CSE208: Data Structures and Algorithms II

Sessional Offline: All pair shortest path

Deadline: 14/06/2022, 11:55 pm

Implement a) Matrix multiplication and b) Floyd-Warshall algorithms for solving the All Pairs Shortest Path problem. The problem is to find shortest distances between every pair of vertices in a given edge weighted directed Graph.

Input: The first line of the input file will contain the number of vertices $0 < n < 100$ and the number of edges m (≤ 10000) followed by m lines each containing origin u, end v and weight w (≤ 100000) of an edge of the directed graph.

Output: Distance matrix including distances between every pair of vertices
